Int 21H, AH=33H, AL=03H

Version

3.4/4.0

Brief

GET CURRENT CPSW STATE

Family API

Input

```
AX = 3303h
```

Return

DL = current CPSW

Macro

Notes

this function and AX=3304h were intended to support a proposed code-page switching flag (using the WORD at offset 0Ch in the DOS directory entry for codepage information); however, this function has always been a NOP in public releases of DOS and OS/2. See _DOS_Internals_ Chapter 2 for more information.

the released MS-DOS 4.00 IO.SYS has an undocumented CONFIG.SYS directive named CPSW= and that beside others the MS-DOS 4.00 ATTRIB supported a number of undocumented special

parameters for “predefined” Extended Attributes (EAs) e.g. ATTRIB filename [(CODEPAGE|CP)[=new_value]].

this function does not use any of the DOS-internal stacks and may thus be called at any time. It is directly dispatched from the INT 21h entry point with interrupts disabled.
