# Int 21H, AH=3CH

## Version

2 and higher

## Brief

“CREAT” - CREATE OR TRUNCATE FILE

## Family API

[DosOpen](#)

## Input

```
AH = 3Ch
CX = file attributes (see #01401)
DS:DX -> ASCIZ filename
```

## Return

```
CF clear if successful
    AX = file handle
CF set on error
    AX = error code (03h,04h,05h) (see #01680 at AH=59h/BX=0000h)
```

## Notes

if a file with the given name exists, it is truncated to zero length

under the FlashTek X-32 DOS extender, the pointer is in DS:EDX

DR DOS checks the system password or explicitly supplied password at the end of the filename against the reserved field in the directory entry before allowing access

Bitfields for file attributes:

Bit(s)	Description
0	read-only
1	hidden
2	system
3	volume label (ignored)
4	reserved, must be zero (directory)
5	archive bit
7	if set, file is shareable under Novell NetWare
