

Note: This API call is for DOS and Win16 personality only. Use Family API for portability.

2018/09/07 05:04 · prokushev · 0 Comments

Int 21H, AH=4EH

Version

2 and higher

Brief

“FINDFIRST” - FIND FIRST MATCHING FILE

Family API

DosFindFirst

Input

```
AH = 4Eh
AL = special flag for use by APPEND (refer to note below)
CX = file attribute mask (see #01420 at AX=4301h) (bits 0 and 5 ignored)
    0088h (Novell DOS 7) find first deleted file
DS:DX -> ASCIZ file specification (may include path and wildcards)
```

Return

```
CF clear if successful
    Disk Transfer Area filled with FindFirst data block (see #01626)
CF set on error
    AX = error code (02h,03h,12h) (see #01680 at AH=59h/BX=0000h)
```

Notes

- for search attributes other than 08h, all files with at MOST the specified combination of hidden,

system, and directory attributes will be returned. Under DOS 2.x, searching for attribute 08h (volume label) will also return normal files, while under DOS 3.0+ only the volume label (if any) will be returned.
- this call also returns successfully if given the name of a character device without wildcards. DOS 2.x returns attribute 00h, size 0, and the current date and time. DOS 3.0+ returns attribute 40h and the current date and time.
- immediately after an INT 2F/AX=B711h (APPEND return found name), the name at DS:DX will be overwritten; if AL=00h on entry, the actual found pathname will be stored, otherwise, the actual found path will be prepended to the original filespec without a path.
- under LANtastic, this call may be used to obtain a list of a server's shared resources by searching for "\\SERVER*.*"; a list of printer resources may be obtained by searching for "\\SERVER\@*.*"
- under the FlashTek X-32 DOS extender, the filespec pointer is in DS:EDX

BUGS

- under DOS 3.x and 4.x, the second and subsequent calls to this function with a character device name (no wildcards) and search attributes which include the volume-label bit (08h) will fail unless there is an intervening DOS call which implicitly or explicity performs a directory search without the volume-label bit. Such implicit searches are performed by CREATE (AH=3Ch), OPEN (AH=3Dh), UNLINK (AH=41h), and RENAME (AH=56h)
- DR DOS 3.41 and 5.0 return the Directory attribute for the volume label
