Int 21H, AH=5FH, AL=05H

Version

4 and higher

Brief

GET EXTENDED REDIRECTION LIST ENTRY

Family API

Input

```
  AX = 5F05h
  BX = redirection list index
  DS:SI -> buffer for ASCIZ source device name
  ES:DI -> buffer for destination ASCIZ network path
```

Return

```
CF set on error
AX = error code (see #01680 at AH=59h/BX=0000h)
CF clear if successful
AX = server's network process ID handle (10NET)
BH = device status flag (bit 0 clear if valid)
BL = device type (03h if printer, 04h if drive)
CX = stored parameter value (user data) from AX=5F03h
BP = NETBIOS local session number
DS:SI buffer filled
ES:DI buffer filled
```

Macro

Notes

The DS:SI string must be either a local device name, a drive letter followed by a colon, or a network directory beginning with two backslashes. The DOS kernel calls INT 2F/AX=111Eh with AX on top of the stack. Also supported by Banyan VINES, LANtastic, and 10NET. For NetWare, if only a server name is specified (i.e. “\\SERVER”), the connection to that server will be closed

See also

```
The local session number allows sharing the redirector's session number. If
an error is caused on the NETBIOS LSN, the redirector may be unable to
correctly recover from errors. The DOS kernel calls INT 2F/AX=111Eh with AX
on top of the stack. Supported by DR DOS 5.0. Also supported by 10NET v5.0
```

Note

Text based on Ralf Brown Interrupt List Release 61
